

Dry Ears

Why is this water so difficult to remove?

This is due to surface-tension effect as well as the fact that it is extremely difficult to break the

How does DryEars work?

DryEars works due to its powerful surface-tension releasing properties which quickly dislodge the trapped water from the sides of the ear canal, allowing it to easily run out.

How quickly does DryEars work?

Usually within a few seconds after usage.

When should DryEars be used and what is the dosage?

DryEars should be used immediately after leaving the water. Use 1-2 Sprays (Puffs) in each ear. Trapped ear-water will rapidly run out or simply evaporate away.

When should DryEars Spray NOT be used?

DryEars Spray is safe for use by adults and children when used as recommended. However, they should not be used if any ear infection is present, if there is any ear discharge, or if you have a perforated ear drum. Do not use on broken skin, or if pain is experienced. Consult a doctor in all these cases. A mild warming or tingling sensation may be experienced by some individuals when using DryEars and is quite normal.

Besides the discomfort, what happens if trapped ear-water is allowed to remain in the ear?

Today, even apparently clear pool or sea water contains pollutants and harmful bacteria. If allowed to remain in contact with the ear, these could lead to painful and unpleasant ear infections which might need antibiotic treatment by a doctor and may lead to the ruining of a vacation.
